RIM-V

VALLEY PANEL SYSTEM FOR CONCEALED ROOF & GUTTER DE-ICING

PRODUCT OVERVIEW

nVent RAYCHEM brand Roof Ice Melt (RIM) systems are designed to eliminate icicles and ice dam problems in wide range of applications.

RIM Valley nVent RAYCHEM (RIM-V) system is used for de-icing in roof valleys. It is also used in other applications such as large gutters, mullions and skylights. The system consists of high wattage RAYCHEM IceStop electric heating cable, Aluminum extrusion designed to fit the cable and a cover panel for efficient heat transfer. The RIM Valley system uses 2 linear runs of cable with power output necessary for heavy snow load areas.

RIM systems provide:

- Long term roof deicing solution by mechanically protecting the heating cable
- Aesthetically pleasing solution by concealing the heating cable
- High performance and reliable solution for heavy snow load areas

APPROVALS

The IceStop heating cables are UL Listed and CSA Certified only when used with the appropriate agency-approved nVent connection kits and accessories. For approvals information, refer to the IceStop heating cable data sheet H56428.

GROUND-FAULT PROTECTION

To minimize the danger of fire from sustained electrical arcing if the heating cable is damaged or improperly installed, and to comply with the requirements of nVent, agency certifications, and national electrical codes, ground-fault equipment protection must be used on each heating cable branch circuit. Arcing may not be stopped by conventional circuit protection. Many RAYCHEM control and monitoring systems meet the ground-fault protection requirement.
